X-Roll-Up

Axelent's X-Roll-up is an excellent versatile alternative to doors where only a partial opening is required. For the implementation at manual workstations X-Roll-up is an ideal application for an effective and economical solution.

The manual roller door consists of a modular system with integrated spring loaded shaft and is available as standard in three widths and two heights. X-Roll-up wraps the aluminium rolling door during opening onto a shaft in the box at the top.

X-Roll-up is offered like a kit (including mounting material). Posts and wall section needs to be ordered separately. Integration into the X-Guard system is easy.

Heights: 2000 mm (2185 mm incl. top box) and 2300 mm (2485 mm incl. top box). Available in RAL 9011 (other colours available upon request).
